PROFILE

Visionary fullstack developer and founder of Reltroner Studio, specializing in end-to-end product delivery across modern web stacks. Demonstrated excellence in building, deploying, and maintaining structured, scalable platforms from a Next.js-powered worldbuilding site to a feature-complete HRM system using Laravel 12. Expert in SSR architecture, CI/CD pipelines (Vercel, Railway), and rapid cloud deployment using automated pre-deploy and start command configuration.

Proven track record in delivering projects solo at a speed and quality matching startup development teams, with direct experience in real-time data visualization, location-based features, and cloud-native workflows. Passionate about future-proofing digital ecosystems with clarity, adaptability, and strategic vision.

Key Achievements:

- Launched Reltroner HRM (Laravel 12), achieving production-ready deployment on Railway cloud in just 15 days, including complex features: authentication, payroll, attendance tracking, real-time statistics, and geo-location mapping.
- Delivered a fully responsive, data-driven admin dashboard using modern UI/UX principles and reusable Blade components.
- Automated database migration, seeding, and CI/CD processes, matching the productivity of a 2–3 person dev team in leading HR Tech startups.
- Designed and launched Next.js-based worldbuilding platform, integrating structured content engineering and SSR for global scalability.
- Consistently recognized for self-driven learning, debugging, and rapid delivery of MVPs that exceed standard industry timelines.

EXPERIENCE

Reltroner Studio Founder

Apr 2024 - Present

Reltroner Studio

Type: Freelance / Personal Studio

Description:

Architected, developed, and deployed a custom worldbuilding platform under the Reltroner Studio brand, leveraging Next.js 15 for server-side rendering and scalable content delivery. Led end-to-end project execution from requirements gathering and structured content modeling to UI/UX design, SSR optimization, and cloud deployment (Vercel). Integrated dynamic data systems, modular components, and markdown-driven workflows to support data-driven storytelling and global accessibility.

- Designed system architecture for scalable, multi-entity content management
- Implemented modern SSR, static site generation, and SEO optimization strategies
- Integrated Tailwind CSS for responsive and maintainable UI
- Automated deployment pipeline using Vercel CI/CD
- Authored technical documentation and user onboarding guides
- Demonstrated strong self-management, rapid iteration, and project delivery skills

Type: Freelance / Personal Studio

Description:

Engineered a full-featured Human Resource Management (HRM) system as a solo developer, utilizing Laravel 12 for robust backend services and Railway for cloud deployment. Delivered end-to-end solutions including employee management, attendance tracking with geo-location, payroll processing, and a responsive admin dashboard with real-time statistics. Implemented CI/CD workflows, automated migration and seeding, and successfully troubleshooted production deployment issues.

- Built complex relational database models and RESTful APIs
- Integrated location-based features (Google Maps) for attendance
- Deployed production-ready app to Railway with automated pre-deploy commands
- Provided comprehensive validation, security, and user authentication layers
- Matched output and quality of a typical 2–3 person development team in a startup sprint

EDUCATION

Bachelor's Degree (S1) in Information Systems

Universitas Andalas | Padang, Indonesia

2027

LANGUAGES

English

Working Knowledge

OTHER SKILLS & CERTIFICATIONS

- **Server-Side Rendering (SSR):** Next.js 15, React SSR workflows, static and dynamic rendering strategies.
- **Fullstack Development:** Laravel 12, Express.js, MySQL/MariaDB, MongoDB; RESTful API design; Eloquent ORM & Mongoose.
- **CI/CD & Cloud Deployment:** End-to-end deployment pipelines using Vercel, Railway, and GitHub Actions; automated database migration & seeding; custom pre-deploy/start commands for production workflows.
- **Frontend Technologies:** Tailwind CSS, Bootstrap 5, React ecosystem (Hooks, Context API, Router, Next.js App Directory).
- **Version Control & Collaboration:** Git, GitHub Workflow, branch management, hard reset, stashing, pull request reviews.
- **System Architecture:** Structured content engineering, scalable data models, worldbuilding logic for complex web platforms.
- **API Integration & Technical Documentation:** UX-focused API design, OpenAPI/Swagger, and in-project documentation best practices.
- **Self-Taught Software Execution:** Demonstrated ability to independently deliver complete SaaS and web systems from scratch, including debugging, production troubleshooting, and rapid prototyping.
- **Admin Dashboard Design:** Experience with Mazer and custom dashboard templates for responsive, data-driven interfaces.
- **Location-based Services:** Integration of geolocation (latitude/longitude) and Google Maps embeds into HR and tracking systems.
- **English Proficiency:** Professional working proficiency for documentation, technical discussion, and international collaboration.
